

5.

$$\text{面积 } S = \int_0^b \left(\frac{a}{b}y - ky^2 \right) dy$$

$$= \frac{1}{2}ab - \frac{k}{3}b^3$$

且有 $k = \frac{a}{b^2}$ 则有 $S = \frac{1}{6}ab$

则有 $\vec{G} = \rho g S \vec{k} = \frac{1}{6} \rho ab g \vec{k}$

$= \frac{1}{6} \rho ab g \vec{k}$ 向上方向

$$Q \quad x_c = \frac{\int_0^b \int_{ky^2}^{\frac{a}{b}y} x \, dx \, dy}{S} = \frac{2}{5} a$$

匀质情况

$$y_c = \frac{\int_0^b \int_{ky^2}^{\frac{a}{b}y} y \, dx \, dy}{S} = \frac{1}{2} b$$

重心位置 $\left(\frac{2}{5}a, \frac{1}{2}b \right)$
